

**SEMINAR SUMMARY:
APRIL 7, 2026 - RICHARD HAMMACK
GRAPHS, PRODUCTS, AND FOLDING.**

ROB TOMPKINS

1. GRAPH PRODUCTS

We began the seminar with the definitions of a graph, as in a graph from graph theory. Let $i, j, n \in \mathbb{Z}^+$, generally a *graph*, G , is a set of *vertices*, $V(G) = \{x_1, \dots, x_n\}$, and a set of *edges*, $E(G) = \{(x_i, x_j) : \text{where } x_i, x_j \in V(G) \text{ and } i, j \leq n\}$.
